Push to Talk Over Cellular (POC)

iPTT and Smye Rumsby supply POC radios to Environmental Therapy to ensure reliable communications, keeping their staff and participants safe during their outdoor therapy sessions.

Environmental Therapy has been recognised as an effective way of working with young people and families in crisis. Their aim is to engage with young people where traditional therapy modalities and settings have been unsuccessful.

For over 24 years Environmental Therapy has used the medium of the outdoors to work with young people and families in crises. This can consist of individual 1:1 work with young people, sessions with families or groups of families, group work with different age groups or groups of young people with specific difficulties such as ASD, ADHD, social withdrawal, OCD etc.

Reliable communications is essential to ensure the safety of Environmental Therapy's staff and our young people and families. POC (Push to talk over cellular) radio systems are highly functional and highly affordable. iPTT terminals cost less than most mid to high tier DMR digital radios, operating nationwide and even Europe over 3G / 4G networks.

To find out more about Environmental Therapy contact Andrew Fryer-Kelsey on: 07846 676864 or email: enquiries@environmentaltherapy.co.uk

Smarter solutions for smarter business.

Push to Talk Over Cellular (POC)

Andrew Fryer-Kelsey from Environmental Therapy says; *“This therapy is based outdoors throughout all seasons and with health and safety paramount it is imperative we have the means to communicate with the team. With iPTT’s push-to-talk radios we have been extremely impressed as they have never let us down. Recently we completed the three lakes challenge and again the radios were invaluable; not just with the team who accompanied me but also to update the office in Kent when we were in Scotland.”*

With the iPTT system you get immediate comms at the push of a single button. iPTT have also thought about the GPS positioning and reporting through a dispatcher software application that can be running on a home computer. Hans Becker, Director of iPTT in the UK, say they are currently looking at IP68 rated units to work in extreme conditions as well as other technical innovations to further increase the capability of the handsets.

Coverage

98% of the UK is covered by our 4-network auto-roaming data service.

Dispatch Software

Track users live on a map, record conversations and make private and group calls. All from your PC.

GPS Tracking

GPS tracking is available on all radio terminals.

Sound Quality

Wideband audio streams allow for loud punchy audio.

Our thanks to our partner, Smye Rumsby
