Push to Talk Over Cellular (POC)

iptt Multi-network SIMs

1 cellular network coverage is not always enough.

With 3 or 4 multi-network SIMs you can benefit from each cellular network's coverage.

How does it work?

- Our SIMs are unsteered, which means they don't try to connect to a specific network continuously
- The SIM logs onto one network and finds the best connection
- If the signal strength drops the SIM will move to 3G or 2G
- If that doesn't give a cellular connection, the SIM will roam between the available network and pick the strongest

To find out more or to discuss your requirements please call us on:
